## Introduction

### Mōhio Post Natal Screening Form

Following a review of the Mōhio *Healthy Mum Healthy Baby form* there are two changes to improve user experience. The changes are:

1. The Form has been renamed POST NATAL SCREENING – it replaces the formed named Healthy Mum Healthy Baby
2. The form now includes the option to record **Gestational Diabetes**. There is the option in the drop down to click “yes”. This triggers an alert indicating that the Mōhio form will automatically generate either a Read code (**MedTech 32 and MedTech Evolution: L1808.11, MyPractice: L1808**) or Snomed CT Code (**Indici: 11687002**) entry for Gestational Diabetes once the form has been submitted.

### Gestational Diabetes Patient List

1. An accompanying Gestational Diabetes Patient List is available in Mōhio reports. This list provides clinicians with a starting point for blood test recalls with this group of patients. **This patient list will be available from 3 May, 2023.**
2. This list is an inclusion list and will show all patients who have been classified in the PMS as having Gestational Diabetes with either the Read Code L1808.11 (MedTech 32 and MedTech Evolution), Read Code L1808 (MyPractice) or Snomed CT Code 11687002 (Indici).

**This Gestational Diabetes Patient list is a supplementary document and does not replace clinical judgement. Clinician’s discretion is advised.**

Screen shots are below.

Notes

Logged in: AshleyH

Gestational Diabetes option now available

3. Pop-up message when the clinician selects: "yes" in the drop down box

akphotest.mohio.co.nz says

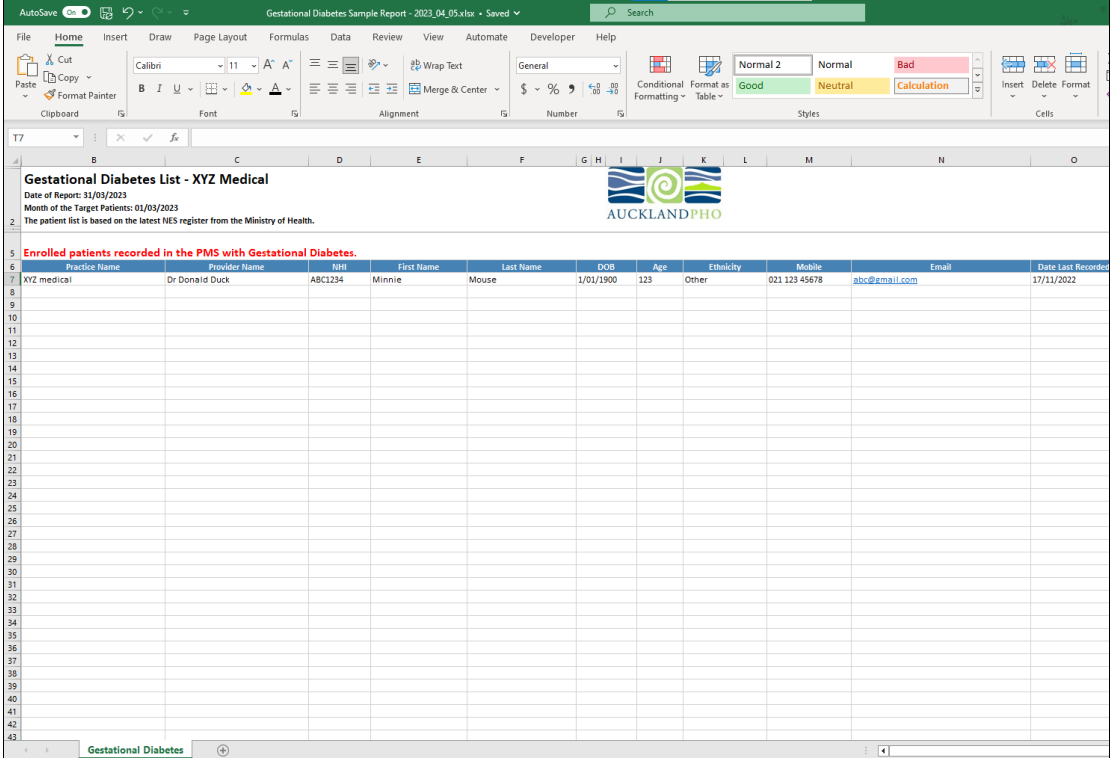

A Read code (L1808.11 – Medtech 32/Evolution, and L1808 - MyPractice) or Snomed CT Code (11687002 - Indici) for Gestational Diabetes will be automatically generated for the patient and entered into classifications when this form has been submitted. Remember to set a recall for a repeat HbA1c blood test 3 months postnatally and annually thereafter. For more information refer to Auckland Region HealthPathways - Diabetes in pregnancy (URL: <https://aucklandregion.communityhealthpathways.org/79572.htm>).

"A Read code (L1808.11 – Medtech 32/Evolution, and L1808 - MyPractice) or Snomed CT Code (11687002 - Indici) for Gestational Diabetes will be automatically generated for the patient and entered into classifications when this form has been submitted.
